

EURO PARCEL SHELF INSTALLATION INSTRUCTIONS P/N NMI7610

The Euro Parcel Shelf converts the area under the steering column into a useful shelf for small items such as sun glasses or cd's.

Euro Parcel Shelf kit contents:

- Euro parcel shelf
- Rubber tray mat
- Blanking plate
- Bolts (2 ea.)
- Nut clips (2 ea.)

Installation summary

The installation of the Euro Parcel Shelf requires the removal of the factory knee bolster cover. This cover is 'snap fit' into place and mounted on plastic hinges. Once this plate is removed, the Euro easily slides into place and is secured with two bolts. The blanking plate covers the small opening for a switch.

INSTRUCTIONS

1. Using gentle but deliberate pressure, push the front edge of the knee bolster cover straight down. The front edge will release and swivel down along the back edge.

2. Maneuver the cover until it releases from the three plastic hinges. The photo below shows the location of the plastic hinges.

3. With the cover removed, install the plastic nuts on either side of the steering column as shown.

Left side nut.

Right side nut.

4. Slide the Parcel Tray into position in a horizontal motion. The guides along the sides will neatly slide the tray into proper position.
5. With the tray in place, secure the tray using the two bolts into the plastic nuts. If you have difficulty aligning the bolt to nuts, use a piece of tape to keep the nuts in proper position.

6. Once the tray is secured, take the blanking plate and cover the switch opening along the left side.
7. Insert the rubber tray onto the shelf.
